

Analogue Fixed Cellular Terminals

Landline to Mobile Cost Reduction Products

- ▶ Up to 8 simultaneous calls
- ▶ Up to 8 SIM Cards
- ▶ Scalable from 2 GSM Channels to 8 GSM Channels
- ▶ Voice & Data Transmission
- ▶ Dial-Thru or Dedicated Connectivity
- ▶ SMS Message Feature
- ▶ Baby Call Feature
- ▶ CLIP Support
- ▶ EFR Super-sound voice quality
- ▶ Serial Port for GPRS / CSD connection
- ▶ Mobility Extension Feature
- ▶ FXS & FXO Interfaces

Are you spending a fortune on landline to mobile calls? Are you looking to dramatically reduce your bill? Then look no further than our range of Fixed Cellular Terminals (FCT's).

Our Analogue Fixed Cellular Terminals enable up to 8 simultaneous calls - the ideal cost saving solution for small, medium or large sized businesses.

Sophisticated Routing

Thanks to the sophisticated Least Cost Routing (LCR) in our Analogue Fixed Cellular Terminals, all calls are always routed in the cheapest possible way. As a call passes through the FCT, the LCR selects the cheapest way for the call to be connected. For example, in it's simplest form, a call to a mobile phone will be routed via the SIM Card to the GSM Network whereas a landline to landline call will be forwarded to the PSTN network.

Easy Connectivity

Analogue FCT's from Roamafone Ltd are compatible with any PABX system or analogue lines. SmartGate and Omikron can be connected between your PABX and PSTN eliminating the need to install additional analogue ports or reconfigure your PABX. When connected to a PABX and a PC (LAN), EasyGate and SmartGate can be used for voice, data through GPRS, SMS sending and receiving and PC Fax transmission.

EasyGate

EasyGate is single-line Analogue FCT suitable for small businesses to reduce call costs to mobiles, send & receive SMS and GPRS Internet connection. EasyGate connects to a 2-wire analogue trunk port interface on any PABX or any analogue phone line. EasyGate also supports a GPRS/CSD and PC Fax connection for internet, data and PC fax sending and receiving. A simple user-friendly GUI for

SmartGate

SmartGate is a single-line Analogue FCT suitable for small businesses and home workers. SmartGate can be connected to any analogue trunk or extension port on a telephone system. The FCT can be used for voice, GPRS data, SMS sending and receiving and PC Fax transmission. SmartGate includes a host of advanced features and functions to dramatically reduce call costs, these include:

Follow ME

This feature is useful for home workers with a standard analogue (or ADSL) line. Follow ME enables all incoming calls to automatically be forwarded to a mobile phone without incurring high network divert charges and landline to mobile costs.

Mobility Extension

This feature allows your mobile phone to become an extension off your PABX. Both the mobile handset and desk phone ring for all incoming calls - when either device is answered, the other stops ringing. If the call is answered on the mobile handset, all the features of the host PABX such as hold and transfer are available on your mobile phone!

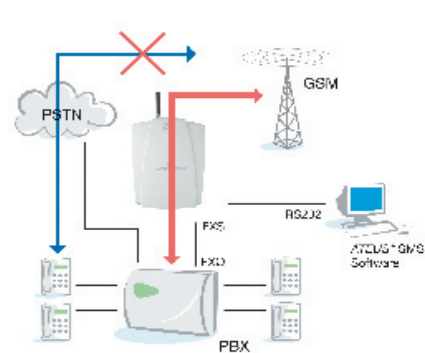

Omikron

Omikron is a multi-line Analogue Fixed Cellular capable of routing up to 8 simultaneous calls to GSM. Omikron is suitable for small to medium sized businesses using Analogue PSTN lines. The FCT comes with sophisticated least cost routing to ensure all calls are routed in the cheapest possible way and dynamic minute management to ensure you can avoid those huge bills. The option to connect in both dedicated mode or dial-thru is available. If connecting the unit in dial-thru mode, there is no need to change your PABX configuration or install additional analogue line cards as the Omikron sits between your PABX and PSTN.
